May 20th Family Day at Southlands Heritage Farm

Enjoy a family afternoon on a working farm in Southlands. There will be a spring market, ukulele music, pony rides (\$10), a scavenger hunt, marshmallow roasting over the bonfire, and more. Meet the honey bees, Mason bees, sheep, goats, chickens and ducks on a guided tour of the farm. *The fun starts at 11 a.m., goes until 3 p.m.*

SALMONBERRY DAYS is Dunbar's unique, month-long neighbourhood environment festival. It is organized each year by volunteers. Let these family-friendly events become part of your kids' memories of childhood.

Theme: Trees

"I think that I shall never see / A poem lovely as a tree." Joyce Kilmer.

Slack Family Photo

Real estate advertisements sometimes describe the Dunbar neighbourhood as "leafy", acknowledging our tree-lined streets.

We are fortunate that decades ago street trees were planted that today are mature, and there is an incredible variety of city and private trees in the area. In a short walk you can see horse chestnut trees, monkey puzzles, London planes and windmill palms. Pacific Spirit Park provides us with a wonderful forest within walking distance of many homes. So, let us celebrate our "leafy suburb" with Salmonberry Days tours of appreciation for trees. Please check this calendar for dates of tree and forest tours, and also the variety of other events for our annual May Festival.

Geology of the Vancouver area as seen in Jericho Beach Park and along Kitsilano

Beach, with David Cook Geologist.

Meet in the parking lot at the far west end of Point Grey Road (which is a *cul de sac* ending at the eastern boundary of Jericho Beach Park. Do not end up in the parking lot on the west side of Jericho Beach Park.)

After a brief sortie on Jericho Beach Park at low tide, we will walk east looking at the rocks and landscape features both along the Kitsilano Beach foreshore and what we can see across Burrard Inlet. We will see coal-bearing sandstones with leaf fossils laid down by 40 million year old rivers; giant boulders brought south by glaciers from their source as far away as Squamish and stranded here 12,000 years ago by the retreating ice; a volcanic dyke, evidence of 32 million year old volcanic activity; and how unceasing wave action is slowly eating away the beach frontage. Looking around Burrard Inlet, we will observe rocks and land forms that were created over the last 100 million years by plate tectonics, sea-level changes and ice movement. Wear appropriate non-slip footwear for wet and rocky terrain.
